Dear Hiring Team,

I'm applying for the Associate Applied AI Engineer role in the Orbit Program because it combines three things I enjoy most: understanding real business problems, building data- and AI-driven solutions, and demonstrating value through working prototypes.

Through NOVA SBE's partnership with Celonis, my Celonis certification, and conversations with Julian Beyerlein, I gained first-hand insight into Celonis Value Engineering culture. Speaking directly with employees helped me understand how strongly the role focuses on ownership, hands-on proof projects, and acting as a trusted technical advisor for customers — which is exactly the kind of environment I'm looking for.

During my studies and professional experience, I've built and iterated on analytical and AI-driven solutions using Python, SQL, and machine learning, often moving quickly from idea to proof of concept. I enjoy the discovery phase with customers, prototyping solutions, and clearly showing how technology can support business decisions — which aligns closely with the Applied AI Engineer role within the Global VE Center of Excellence.

I'm fluent in German and English, comfortable presenting to senior stakeholders, and fully open to relocating to Madrid for onboarding and traveling regularly across the DACH region.

I would welcome the opportunity to discuss how my background and motivation could support Celonis and its customers.

Kind regards,

Philipp Oliver Laurence Goetting
