

Philipp Oliver Laurence Goetting

09th of January 2026

Dear Hiring Team,

I'm applying for the Associate Technology and Management Consultant role in the Orbit Program because it closely matches how I like to work: understanding how a business really operates, using data and technology to improve it, and clearly explaining where value is created.

Through NOVA SBE's partnership with Celonis, my Celonis certification, and conversations with Julian Beyerlein, I had the opportunity to speak directly with Celonis employees and gain first-hand insight into the Value Engineering role. What stood out to me was the strong ownership mindset, the close collaboration with customers, and the clear focus on creating measurable impact rather than theoretical solutions.

In my previous roles, particularly at Fidelity International, I worked closely with business and technical stakeholders to clarify requirements, map processes, and translate complex topics into clear recommendations for decision-makers. This hands-on, customer-facing way of working is very similar to how Value Engineering at Celonis is described, especially during discovery phases and proof projects.

The Orbit Program's mix of structured learning, mentorship, and early customer exposure feels like an ideal environment for me to grow quickly while contributing from the start. I'm fluent in German and English, comfortable presenting to senior audiences, and open to relocate to Madrid for the onboarding period.

I would be happy to discuss my motivation and fit for the role in more detail.

Kind regards,
Philipp Oliver Laurence Goetting
