

Sales Engineer

Philipp Oliver Laurence Goetting

19th of January 2026

Dear Hiring Team,

I want to help Rithum customers grow through your commerce platform. With 3+ years working between technical teams and business stakeholders at Fidelity International (€35.4B platform), plus hands-on Python/SQL data pipeline experience from my M.Sc. thesis, I understand high-volume transactional systems and e-commerce challenges.

At Fidelity, I was the first point of contact for Finance Directors and IT Managers with data requests. I sat down with them, understood their real problems, mapped data flows to business processes, built data dictionaries, and worked with the COO team to deliver solutions. This is exactly the solutions discovery → technical demo → value demonstration cycle Rithum Sales Engineers run.

My thesis processed 200M+ retail transactions (Python/SQL/AWS), integrating APIs and diverse data sources. I've analyzed 1,500 US stores across marketplaces, margins, and competition—giving me retail insight plus proven ability to handle Rithum-scale data transformation.

You power \$50B+ GMV across Amazon, Walmart, Shopify. I love translating complex technical capabilities into clear business wins for skeptical enterprise buyers. Remote Spain + 10% travel works perfectly.

Ready to help brands and retailers scale through seamless technical demonstrations and objection handling.

Kind regards,

Philipp Oliver Laurence Goetting
