

Philipp Oliver Laurence Goetting

19th of January 2026

Dear Hiring Manager,

I am keen to support Ryanair's industry-leading safety record through rigorous data analysis. With an M.Sc. in Business Analytics and over three years of experience working with high-stakes, regulated data at Fidelity International (€35.4B platform), I bring a strong foundation in data governance, visualization, and stakeholder-facing reporting relevant to Safety Performance Indicators and hazard trend analysis.

At Fidelity, I assessed data accuracy across financial reporting processes, mapped end-to-end data flows, created data dictionaries, and visualized insights for senior leadership. This work required precision, structured investigation, and clear communication—skills directly applicable to safety reporting, ALOSP tracking, and escalation workflows. Previously, at BVZ, I conducted process analysis through stakeholder interviews and flow mapping to identify operational risks and bottlenecks.

My technical background includes building Python and SQL pipelines processing 200M+ transactions for my M.Sc. thesis, developing dashboards and statistical analyses, and presenting complex findings clearly using Power BI and Tableau. I am comfortable working with large datasets, defined data standards, and audit-ready documentation.

Ryanair's scale and growth—approaching 800 aircraft and 300 million passengers—are particularly motivating. I hold an EU passport with full eligibility to work in Ireland, and Dublin is an ideal base for me given my international background across the UK, Switzerland, and Spain.

I would welcome the opportunity to contribute to Ryanair's safety team by supporting investigations, escalating insights from safety data, and helping maintain the highest operational standards.

Sincerely,

Philipp Götting
