Professional Summary

Solutions-oriented technologist with 3+ years of experience in data management, analytics, and consulting roles within regulated financial and banking environments, complemented by NGO and advisory experience. Brings a unique blend of technical depth and client-facing expertise, developed through consulting, recruitment, and client facing roles, enabling effective listening and translation of customer needs into robust technical solutions.

Education

NOVA SBE

MSc. in Business Analytics

Carcavelos, Portugal

Sept 2024 – Feb 2026

Thesis: Analyzed 1,500+ US retail stores using a year worth of transaction data from AWS S3, integrating Census Bureau, labor statistics, competitor analysis (web scraping), and Google APIs for predictive modeling.

International School of Management

BSc. in Psychology and Management

Frankfurt, Germany

Sept 2017 – Feb 2021

Experience

Data Management & Governance

Fidelity International

Kronberg, Germany

Aug 2022 – Mar 2024

- Partnered with stakeholders across Finance, Operations, and Legal to understand business requirements and compliance challenges; translated these into clear technical architectures and data governance solutions that could scale across a 35.4B AUM platform
- Led cross-functional workshops to gather requirements, map end-to-end data flows from source systems to reporting, and define current- and target-state architectures for critical business reporting
- Served as primary point of contact for ad-hoc data requests and reporting challenges; gathered requirements, scoped technical solutions, and delivered analyses that drove operational and management decisions—effectively pre-qualifying and positioning data solutions for internal customers
- Analyzed and documented end-to-end data flows, identified quality and transparency gaps, and designed governance models for system access and data stewardship, balancing regulatory compliance, security, and usability
- Designed and implemented a global data taxonomy in Collibra for German entities, aligning local regulatory requirements with international technical teams in the UK, Ireland, and India
- Presented data stories and solution concepts to C-level executives and participated in cross-functional innovation initiatives to develop real-life use cases

Data Analytics Boot Camp

CareerFoundry

Frankfurt, Germany

Oct 2021 – May 2022

Process Analyst & Administration

BVZ (NGO)

Frankfurt, Germany

Apr 2021 – Mar 2022

- Transitioned to an analytical role after demonstrating operational proficiency of internal HR and contracting workflows
- Developed detailed workflow analysis and process mapping for the contracting department, creating comprehensive process diagrams and operational manuals that served as the basis for later system improvements

Working Student & Intern

Early Career and Global Exposure

around the world

Sept 2014 – Sept 2017

Projects

Retrieval-Augmented Generation (RAG) System

A web application for movie recommendation system

- Implemented RAG pipeline combining document retrieval with LLM generation using Python, Hugging Face/OpenAI APIs, and sentence-transformers
- Built vector store using FAISS for nearest-neighbor retrieval and integrated with LangChain for prompt engineering
- Conducted document preprocessing, embedding generation, retrieval tuning, and evaluation of factuality and answer relevance

Dyslexia Support & Detection Prototype

Web application for analysing handwritten text for dyslexia support & detection

- Developed NLP-based prototype to analyze reading patterns and assist dyslexia evaluation using Python, spaCy, and scikit-learn
- Created text complexity metrics, feature extraction, and classification models with Streamlit UI for demonstration

Advanced Machine Learning Projects

Throughout the master degree several group project where part of the grading system

- Conducted rigorous ML experiments with hyperparameter tuning, model comparison using XGBoost and scikit-learn, and documented findings for reproducibility
- Built collaborative ML pipeline with team including data preprocessing, feature engineering, and Grid-Search/RandomizedSearch optimization
- Implemented Random Forest models with feature engineering scripts and model persistence via pickle/joblib

Skills

Technical & Programming: Python (Advanced), SQL, pandas, scikit-learn, XGBoost, Git/GitHub

Data Architecture & Governance: Data Flow Mapping, Taxonomy Design, Metadata Management, Collibra, Reference Architectures

Cloud & Engineering: AWS S3, ETL Pipeline Design, REST APIs (Google Places/APIs), Web Scraping

Data Tools & Visualization: SAS, Tableau, Power BI, Numpy, RAPIDS, StreamLit

Soft Skills: Stakeholder Requirements Gathering, Executive Presentations, Cross-functional Collaboration, Customer Problem-Solving

Languages: English (fluent, IELTS: 7.5/10), Spanish (beginner, Salimter B1), German (native)

Extracurricular Activities

Social Investment Fund: Portfolio Management Member overseeing a fictional portfolio sorted by students

Celonis: Academic Process Mining Fundamentals
